

Press Release

Engiweb Security Hidden Gem 2010 in IAM GRC area

Rome, Italy – July 6th, 2010 - Engiweb Security, a fully dedicated provider of Identity and Access Governance Solutions, today announced that it has been included in the list of “Hidden Gems” in the Kuppinger Cole “Trend Report: Hidden Gems 2010” research by chief analyst Martin Kuppinger.

“Engiweb Security is really satisfied to be included in Kuppinger Cole ‘Hidden Gems’ trend report” said Alberto Ocello, Engiweb Security General Manager. “We think it is a full validation of our IDEAS unique combination integrating Access Governance functions like Segregation of Duties, Role Management and supporting fine-grain entitlement management and authorization decisions. The Governance, Risk Management and Compliance (GRC) market segment identified by Kuppinger Cole perfectly corresponds to our characteristics and activities”.

About Kuppinger Cole’s Hidden Gems Report

Kuppinger Cole report covers vendors which are, from the Kuppinger Cole perspective, Hidden Gems in the markets they are analyzing. The “Hidden Gems” are vendors which are relatively small and innovative. They might be established in a specific country but not that visible beyond that country. They might be successful only in a specific industry but provide products and services that are of value for many other industries. But all of them have a clear unique selling proposition and are definitely innovative. All of them provide solutions which provide, from the Kuppinger Cole perspective, real business value also from a mid- and long-term perspective.

About Engiweb Security

Engiweb Security was established in 2001 in Rome and since then has had the mission of enabling trusting relationships between organizations while securing enterprise information.

To this end, Engiweb Security offers IDEAS: an integrated Identity and Access Governance solution. With IDEAS’ integrated architecture and innovative technology, customers manage all aspects of User Provisioning, Authorization, Identity Governance, Regulatory Compliance and simultaneously achieve cost, security and service quality results.

IDEAS’ unified model — unique in the IAM market — results in lower implementation and management costs, and greater flexibility. Project risk is a significant factor in an IAM implementation. With the industry’s most robust implementation methodology, IDEAS greatly reduces this risk.
